PROFILE

Computer Engineering graduate ranked 2nd in the department with 92.54/100, and now working as a **Software Engineer** and **Applied AI Engineer** building **production systems** where **strong backend engineering** and **practical AI** meet. My experience spans **SaaS**, **healthcare**, and **AI-native products**, from improving **API reliability** and **engineering quality** to designing **retrieval pipelines**, **multi-agent workflows**, and **resilient AI infrastructure**. Most recently, I helped take **WAKIB.ai** from concept to a live **bilingual AI platform** serving **1,000+ daily users**, combining **software engineering discipline** with **AI systems** built to operate reliably at **real-world scale**.

WORK EXPERIENCE

Ai Product Engineer, Alif Venture Studio

Jun 2026 - Present

- Took **end-to-end ownership** of **WAKIB.ai**, a **bilingual AI intelligence platform**, building across ingestion, AI generation, editorial workflows, and the public product. Launched and scaled it to serve **1,000+ daily users**, helping the platform grow without requiring a large editorial or operational team.
- Designed the core **multi-agent AI pipeline** for transforming fragmented global AI coverage into **verified Arabic and English content**. Introduced **semantic clustering**, **selective evidence processing**, **model routing**, **prompt caching**, **automated validation**, and **human-in-the-loop review**, reducing unnecessary **LLM processing** and manual editorial effort.
- Re-engineered background **AI processing** into a **resilient, self-healing architecture** using **durable job queues**, **automatic retries**, **recovery workers**, **concurrency controls**, **monitoring**, and **real-time alerts**, reducing silent failures and manual intervention as production usage grew.
- Improved performance, **infrastructure efficiency**, and release quality through **Next.js server rendering**, **ISR**, **edge caching**, **WebP optimization**, **CI/CD**, **integration testing**, and **regression safeguards**. Reduced **image storage requirements** by approximately **93%** while improving **production release confidence**.

Full-Stack Engineer, Approved Technologies W.L.L (Part Time)

Sep 2025 – May 2026

- Took ownership of core **backend modules** in a high-traffic **Laravel SaaS** platform, introducing **structured validation**, **unified API responses**, and **systematic edge-case handling**, improving **API reliability** by **18%** and reducing **production issues**.
- Introduced an **API-first development workflow** with **shared contracts** and **standardized documentation**, reducing **integration friction** between frontend and backend teams across **authentication** and **dashboard workflows**.
- Strengthened **engineering quality** through **TDD**, **API testing**, and **structured code reviews**, increasing **automated test coverage** on new features from **~30% to ~80%** while reducing **regression risk** and **repetitive debugging**.
- Collaborated with **senior engineers** and **cross-functional teams** to stabilize **backend services** handling **1,000+ daily requests**, maintaining **reliable production performance** and supporting **continuous feature delivery**.

Full-Stack Engineer Intern, TAQAT

Aug 2025 – Jan 2026

- **Led backend development** of a **healthcare SaaS platform** for clinics in Gaza, coordinating a **4-member development team**, distributing work, guiding **technical decisions**, and helping deliver the system on schedule under **senior engineering mentorship**.
- **Digitized fragmented clinic processes** by designing **secure Laravel and MySQL APIs** for appointments, patient records, billing, administration, validation, and **role-based access**, reducing **manual overhead** and improving consistency across daily operations.
- Designed and optimized **backend logic** supporting **500+ daily active users**, maintaining **reliable performance** and **data consistency** across core clinic-management workflows.
- Improved **team delivery** through clear **API contracts**, **structured code reviews**, **Git-based workflows**, and **cross-team debugging**, reducing **frontend-backend integration friction** and helping the team release more **stable features**.

SELECTED PROJECTS

BridgeAI

Multi-Agent Requirements Engineering Platform

- Built a multi-agent AI platform that transforms unstructured product conversations into structured software requirements and professional CRS/SRS documentation.
- Designed the backend architecture, semantic retrieval pipeline, LangGraph orchestration, real-time WebSocket streaming, and modular service layers to support a repeatable clarification, generation, and review workflow.
- **Tech Stack:** FastAPI, LangGraph, LangChain, ChromaDB, RAG, Next.js, WebSockets, PostgreSQL

Raad

Multi-Tenant AI Customer Service Platform

- Built a multi-tenant AI customer service platform designed to generate context-aware responses to business conversations using company-specific knowledge.
- Developed RAG pipelines and agent workflows that combine conversational context with tenant-specific data while maintaining separation between businesses and providing a scalable foundation for automated customer support.
- **Tech Stack:** FastAPI, LangGraph, LangChain, ChromaDB, RAG, Next.js, WebSockets, PostgreSQL

Azm Alinjaz

Construction Business Management Platform

- Built a full-stack business management platform that centralized operational and administrative workflows in one system, reducing repetitive manual work and helping teams complete day-to-day tasks faster while providing a smoother experience for users and clients.
- Designed the application architecture, relational MySQL schema, authentication, validation, and a granular RBAC system with 5 user roles and 26 permissions, giving each user secure access to the tools and information relevant to their responsibilities while simplifying administration.

SKILLS

Programming & Frameworks: Python, Java, PHP, JavaScript, TypeScript, Vue.js, Next.js, FastAPI, Django, Laravel.

Backend Engineering: RESTful API, RBAC, WebSockets, Authentication & Authorization, Multi-Tenant Systems.

AI & LLM: LangChain, LangGraph, RAG, Agents Orchestration, Embeddings, ChromaDB, AI Workflow Design.

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis, Database Schema Design, Data Modeling.

Software Engineering Practices: System Design, Clean Architecture, SOLID Principles, Design Patterns, TDD, Unit & Integration Testing, API Testing, Code Reviews, Observability, Scalability, Maintainability, Performance.

DevOps & Tools: Git, GitHub, Docker, Postman, Swagger/OpenAPI, CI/CD Awareness, Agile/Scrum

EDUCATION

Bachelor's degree in Computer Engineering, Islamic University of Gaza

Sep 2021- Mar 2026

- **GPA: 3.8/4.0**, Ranked **2nd** in the Computer Engineering Department among graduating cohorts.
- Graduated with academic distinction and consistent **top performance** across core engineering subjects.

Certifications

- Developing AI Applications with Python and Flask - IBM (Coursera)
- Python for Data Science, AI & Development - IBM (Coursera)
- Machine Learning with Python – IBM (Coursera)
- Introduction to Software Engineering – IBM (Coursera)
- Laravel & PHP Mastery – Udemy
- Django REST API Bootcamp – Udemy
- Python & Django Web Development – Udemy
